

NATIVE PLANT FINDER

Commercially Available Host Plants for Butterflies and Moths

TROPICAL HUMID FORESTS ECOREGION

The caterpillars of butterflies and moths feed on the leaves of native plants. Without host plants, these important and beautiful insects cannot complete their lifecycle and their populations decline. Host plants with high butterfly and moth associations play a direct role in supporting bird populations. The native caterpillar host plants listed below are often available at local native plant sales, and increasingly found at nurseries and local garden centers. Please verify the plant is suitable for your local growing conditions.
