

# Southeast Priority Species (RSGCN): Fish

Updated as of February 3, 2021

The following fish species were identified as Regional Species of Greatest Conservation Need (RSGCN) through a collaborative assessment process carried out by the Southeastern Association of Fish and Wildlife Agencies (SEAFWA) Wildlife Diversity Committee. "Regional Stewardship Responsibility" refers to the portion of a species' range in the Southeast relative to North America as a whole. Species marked as "SEAFWA Endemics" are found only in this region, while species with 100% of their North American range in the Southeast may also occur elsewhere. Additional details of this assessment can be found at: <http://secassoutheast.org/2019/09/30/Priorities-for-Conservation-in-Southeastern-States.html>
